

# Archived Data Manager®

## Perform Catalog Backups **90% Faster**

Archived Data Manager® (ADM) is a revolutionary central management system for all your historical and production backup catalogs—regardless of platform or source.

With ADM, older backup images are archived. Your backup catalogs will be considerably smaller, and you'll experience a drastic reduction in your backup window. Moreover, you can restore archived files using ADM, eliminating the need to keep your original application.

- ▶ **Consolidate all**—or part—of your historical and production backup catalogs
- ▶ Enjoy **dramatically faster backup windows** as a result of smaller catalogs
- ▶ **Restore directly from ADM** without having to rebuild your backup catalog
- ▶ **Compatible with all backup software**, including NetBackup™ and Backup Exec™

### **Make Your Next Migration the Quickest and Easiest Ever.**

Changing your backup system is simple and hassle-free with Archived Data Manager. Using our patent-pending rapid extraction technology, you can quickly transfer your existing backup catalog data into ADM, centralizing all of your older backup systems' images for easy accessibility.

- ▶ **Centralize** all of your current backup catalogs
- ▶ **Easily expire backup sets** without the need of your previous backup application
- ▶ **Quickly perform searches** with ADM's intuitive Web interface
- ▶ **Migration is easier than ever**, leaving you free to always choose vendors that are best for your bottom line

### **ADM Cuts eDiscovery Costs by 50% or More.**

Archived Data Manager helps you quickly and easily find the data you need for eDiscovery compliance. ADM extracts, consolidates and centrally indexes all your enterprise backup information. All backup catalog information is now readily accessible through ADM's intuitive, Web-based interface.

Random—and expensive—eDiscovery searches are now targeted, and the number of tapes that need to be indexed is greatly reduced.

### **Add Vertices® to ADM for a total archive solution.**

ADM rapidly extracts the catalog information and Vertices helps you instantly locate the data you need for an end-to-end archived data and eDiscovery solution.

### **Save Millions of Dollars & Turn Your Data Center Green.**

It costs \$15,000 to maintain one server for one year. ADM allows you to rapidly extract and index data from historical backup catalogs and safely decommission those servers while remaining compliant.

- ▶ Significantly reduce energy consumption and your carbon footprint
- ▶ Save valuable square footage in your data centers
- ▶ Save time by centralizing the management of the archived data

### **Contact Us Today to Schedule a No-Obligation Webinar.**

ADM helps you quickly and easily streamline your entire data center. Contact B&L today and we'll show you how to reduce your backup times, migration problems, and litigation risk while saving you money and making your job easier.
