

Manage Archived Data

Navigate Your Information Stores
With B&L's Archived Data Manager

THE ABILITY TO effortlessly search for a single piece of information amid a sea of data is a dream come true for many organizations. With simple organization in mind, B&L Associates has created ADM (Archived Data Manager), a Web-based application that combines historical backup catalogs and organizes them for easy access and management of offline archived data.

Using B&L's patent-pending data extraction technology, ADM can quickly load a server's backup catalog from popular tape backup solutions, including Symantec's Veritas NetBackup, EMC's Legato NetWorker, CA's ARCserve, and HP's Omniback II and Data Protector. ADM features a simple view of a company's backup catalog information and an easy

method of searching files by backup application, backup server, backup client file name, date/time, and expiration date.

B&L highlights ADM's compliance with the amendments to the Federal Rules of Civil Procedure regarding historical backup data. ADM's file-level search makes file discovery quick and easy, which reduces the amount of tapes sent out for content indexing. In accordance with other state and federal laws, ADM features alerts to archived files that are ready for expiration, letting organizations quickly reduce their historical data and avoid related liabilities.

ADM features vast accessibility; once Archived Data Manager has been installed on one computer, it can be accessed from any computer with

an Internet connection, making enterprise-wide use possible. Other features include rapid data extraction, enabling ADM to load a server's backup catalog into the ADM database without interrupting normal business procedures.

B&L Archived Data Manager

Provides a single view of backup catalog information and an easy way to organize and search for files
